information systems have become the backbone of all kinds of organizations day in almost every sector manufacturing education health care government and businesses large and small information systems are relied upon for everyday work communication information gathering and decision making yet the inabilities in current technologies and methods have also resulted in poor performance incompatibilities and obstacles to change as many organizations are reinventing themselves to meet the challenges of global competition and e-commerce there is increasing pressure to develop and deploy new technologies that are flexible robust and responsive to rapid and unexpected change agent concepts hold great promise for responding to the new realities of information systems they offer higher level abstractions and mechanisms which address issues such as knowledge representation and reasoning communication coordination cooperation among heterogeneous and autonomous parties perception commitments goals beliefs intentions etc all of which need conceptual modelling on the one hand the concrete implementation of these concepts can lead to

advanced functionalities e.g. in inference based query answering transaction control adaptive work flows brokering and integration of disparate information sources and automated communication processes on the other hand their rich representational capabilities allow for more faithful and viable treatments of complex organizational processes leading to more effective requirements analysis and architectural detailed design

this book provides practitioners with detailed experiences from industry on the implementation and use of collaboration technologies despite the increasing range of applications available such as video and desktop conferencing systems workflow management systems and on line meeting schedulers there is still little formalized knowledge on how to implement them to maximum effect this book aims to fill that gap by looking at all the issues from the viewpoint of the implementation team and focuses on strategies for overcoming various obstacles and measures which can be taken to enable effective use

this book is a result of isd2000 the ninth international conference on information systems development methods and tools theory and practice held august 14 16 in kristiansand norway the isd conference has its roots in the first polish scandinavian seminar on current trends in information systems development methodologies held in gdansk poland in 1988 this year as the conference carries into the new millennium this fine tradition it was fitting that it returned to scandinavia velkommen tilbake next year isd crosses the north sea and in the traditions of the vikings invades england like every isd conference isd2000 gave participants an opportunity to express ideas on the current state of the art in information systems development and to discuss and exchange views about new methods tools and applications this is particularly important now since the field of isd has seen rapid and often bewildering changes to quote a chinese proverb we are indeed cursed or blessed depending on how we choose to look at it to be living in interesting times

for more than 20 years network world has been the premier provider of information intelligence and insight for network and it executives responsible for the digital nervous systems of large organizations readers are responsible for designing implementing and managing the voice data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce

object role modeling orm is a fact based approach to data modeling that expresses the information requirements of any business domain simply in terms of objects that play roles in relationships all facts of interest are treated as instances of attribute free structures known as fact types where the relationship may be unary e.g. person smokes binary e.g. person was born on date ternary e.g. customer bought product on date or longer fact types facilitate natural expression are easy to populate with examples for validation purposes and have greater semantic stability than attribute based structures such as those used in entity relationship modeling er or the unified modeling language uml all relevant facts constraints and derivation rules are expressed in controlled natural language sentences that are intelligible to users in the business domain being modeled this allows orm data models to be validated by business domain experts who are unfamiliar with orm's graphical notation for the data modeler orm's graphical notation covers a much wider range of constraints than can be expressed in industrial er or uml class diagrams and thus allows rich

visualization of the underlying semantics suitable for both novices and experienced practitioners this book covers the fundamentals of the orm approach written in easy to understand language it shows how to design an orm model illustrating each step with simple examples each chapter ends with a practical lab that discusses how to use the freeware norma tool to enter orm models and use it to automatically generate verbalizations of the model and map it to a relational database
