this fourth edition book includes 12 new chapters covering computational fluid dynamic simulation solar impingement and pulse combustion drying drying of fruits vegetables sugar biomass and coal physicochemical aspects of sludge drying and life cycle assessment of drying systems addressing commonly encountered dryers as well as innovative dryers with future potential the fully revised text not only delivers a comprehensive treatment of the current state of the art but also serves as a consultative reference for streamlining industrial drying operations to increase energy efficiency and cost effectiveness

rice production is affected by changing climate conditions and has the dual role of contributing to global warming through emissions of the greenhouse gas methane climate change has been recognized as a major threat to the global environment because of insufficient field data rice growing countries face a problem when trying to comply with the united nations framework convention on climate change stipulations to compile a national inventory of emissions and to explore mitigation options given the expected doubling in rice production in asia the need to evaluate the interaction between climate change and rice production is critical to forming a sound basis for future directions of technology developments by policy makers agriculturists environmentalists rice producers and rice consumers the present book comprises two sections the first part documents a comprehensive overview of the results achieved from an interregional research effort to quantify methane emission from major rice ecosystems and to identify efficient mitigation options this research report broadens understanding of the contribution of rice cultivation to methane emissions and clarifies that emissions are relatively low except in specific rice ecosystems and that these high emissions could be ameliorated without sacrificing yield the second section shows results from other projects that investigated the role of rice cultivators in field and laboratory approaches the findings represent inputs for future modeling approaches in the role of rice cultivators the expanded database generated by other projects is reflected in modeling efforts

sludge transportation costs can represent a large fraction of the expenses associated with municipal and faecal sludge management these costs can be mitigated through the use of thermal drying approaches to reduce the sludge volume this thesis described the application of a novel microwave based pilot scale unit as an alternative technology for the sanitisation and drying of sludge from municipal wastewater treatment plants and on site sanitation facilities the potential economic benefits of volumetric heating moisture levelling and increased liquid and vapour migration from the interior to the surface of the product underpins the increasing interest in the use of microwave technology during sludge treatment processes according to the findings of this study these factors lead to faster processing times improved drying rates and a reduced physical footprint furthermore microwave technology operates as a standalone treatment unit when coupled with mechanical dewatering techniques and membrane separation technology it can increase the reliability of the technology employed in the treatment of sludge while recovering valuable resources through an agricultural or thermochemical application such as co combustion the results of this work demonstrate the strong feasibility of applying microwave based technology within initiatives designed to protect the environment and safeguard public health

billed in early issues as a practical journal of industrial progress this monthly covers a broad range of topics in engineering manufacturing mechanics architecture building etc later issues say it is devoted to the advancement and diffusion of practical knowledge
