unlike some other reproductions of classic texts 1 we have not used ocr optical character recognition as this leads to bad quality books with introduced typos 2 in books where there are images such as portraits maps sketches etc we have endeavoured to keep the

quality of these images so they represent accurately the original artefact although occasionally there may be certain imperfections with these old texts we feel they deserve to be made available for future generations to enjoy

from the preface i am laying before the public a treatise upon a subject perhaps as extraordinary in its nature as anything that has lately come before them and after a candid perusal should it meet with approbation from the friends to arts and sciences my utmost pride will be gratified the flight of birds although so common and familiar to our sight is certainly as great a phenomenon as any in the creation and artificial flying when accomplished may be considered as one of the greatest wonders of the mechanic arts which i firmly believe attainable upon the plan i have suggested in this little work i have shewn that birds wings do not increase their expansion in exact ratio with the increased specific gravity of their bodies i have given a demonstration of the cause of the projectile motion of birds the discovery of a true knowledge of which has bid defiance to philosophers in all ages which with other discoveries i trust will prove that i have given consistency to what henceforth may be denominated the science of flying and which may alone be deemed of considerable importance to science had nothing more than that been brought forward but as i have gone much further and have advanced arguments and given plans to render the art of flying practicable the importance of this little treatise becomes obvious more particularly so if we take into consideration the various purposes to which artificial flying may be applied when my work was just ready for the press i was much surprised at the account a friend gave me of what he had seen that day upon flying in a monthly journal i immediately procured a sight of it and found it to be an ingenious paper written by sir george cayley and i own i was astonished at the perusal i conceived it to be very extraordinary that two persons not having the least knowledge of each other should be publishing their thoughts at the same time upon such a subject nor was i less surprised to find the subject treated of there in a manner so rational and far superior to anything i had ever seen before from what sir george has thought and the calculations he has made upon the subject he is so genuine in his belief that flying will be effected as to say in one part of his paper as follows i feel perfectly confident however that this noble art will soon be brought home to man s general convenience and that we shall be able to transport ourselves and families and their goods and chattels more securely by air than by water and with a velocity of from 20 to 100 miles per hour vide nicholson s journal for november 1809 for my own part whatever reason i may have to be sanguine of success i have made a resolution to suppress in my work every thought that confidence could suggest beyond what i could give demonstration of along with the clearest directions how to attain the end in view thereby putting it out of the power of critics to say that the principles of my theory have not a good foundation notwithstanding from the novelty and singularity of the subject i do expect to meet with a good deal of raillery and sarcasm the wits will tell me that i am flighty and the more serious and heavy part of mankind who are too ponderous for such aerial flights will express a disapprobation of my scheme
